**British Military Swords and Scabbards**

## GENERAL INFORMATION, HISTORY PRODUCT FEATURES AND WARRANTY

**WKC**  
GERMANY  
Est. 1883

The sword factory W.K.C. in Solingen, Germany was founded in 1883 by the families Weyersberg and Kirschbaum who were verified to have been in the sword business since the middle ages. In the factory they not only produced swords but also knives, cutlery, bicycles, motorcycles and parts for cars.

Kirschbaum was co-founder and partner in the Wilkinson Sword company and supplied them with blades. Actually our first blade roll forge was developed in England in the 19th century.

Today we still produce swords, keeping traditional manufacturing alive in one of the original WKC buildings.

Upon the closure of the Wilkinson Sword factory in 2005 and following a bid process, we were awarded much of their manufacturing equipment, incl. their blade roll-forge and various lots for tools and parts for the following RMAS related swords amongst several others:

- Infantry & Guards Swords & Scabbards.
- Royal Artillery Swords & Scabbards.
- Cavalry Officers & Troopers Swords & Scabbards.
- Basket Hilted Broadsword Swords & Scabbards.
- Royal Navy Swords & Scabbards.
- Royal Air Force Swords & Scabbards.
- Household Cavalry Officer Swords & Scabbards.
- Household Cavalry Troopers Swords & Scabbards.

**REGIMENTAL CRESTS:** These are included in the price and are either incorporated in the etching pattern or engraved into the name panel. For further information, check the attached article list.

**ADDITIONAL CRESTS:** These can be laser engraved. Just send us the black & white artwork, preferably in .bmp format.

**BLADES:** We offer 3 types of blades: Stainless steel, carbon steel or nickel-plated carbon steel. The main difference between the types of blades have to do with the maintenance requirements and the colour of the etching:

- CARBON STEEL: Must be maintained with oil to avoid rust.

- NICKEL-PLATED CARBON STEEL: Nickel acts as a protection against rust. Easy to maintain.

- STAINLESS STEEL: Longest lifetime, easy to maintain.

## - Infantry Pattern 1897 Sword:

Our British Infantry and Corps and Royal Marines Officer's sword (1897 pattern) and scabbard is crafted in accordance with the British MOD specifications.

- Blade:** A forged blade - either stainless steel, carbon steel or nickel-plated carbon steel blade hardened and tempered to ca. 48-52° HRC Rockwell and hand-polished. Both sides are etched using a traditional acid etching technique which results in an etching so deep, that one can feel it with a fingernail. The dimensions of the blade are ca. 825 x 6 x 25 mm.
- Guard:** Pierced steel guard bearing the Royal cypher, hand-polished and nickel-plated.
- Grip:** Handle covered with genuine shark skin, wrapped with 3 silver-plated brass wires.  
Solid brass screw.
- Screw:** Made of solid brass casting, nickel-plated.
- Backing & Ferrule:** Calf-leather.
- Cushion:** -Steel scabbard: 1 mm iron steel tube with brass mouthpiece and 2 stainless steel carrying rings.
- Scabbard:** - Leather scabbard: wooden body covered with brown or black calf leather with nickel-plated mouthpiece.

**Included Accessories:** Protective cloth bag.
